(d) indefinite

Ex. 18.3

(a)
$$\nabla f(x) = \begin{bmatrix} 3x,^2 - 3 \\ 3x_1^2 - 12 \end{bmatrix}$$

High finite

Continuous points:

(1,2) struct local minimizer

(1,-2) saddle point

(-1,2) saddle point

(-1,-2) struct local maximizer

Ex. 18.4

(a) $\nabla f(x) = \begin{bmatrix} 2x, -4 \\ 4x_1 \end{bmatrix}$ so (2,0) is a critical point.

High finite on \mathbb{R}^2

So (2,0) is a global minimizer

Ex. 18.1

(a) positive definite

(c) indefinite

(b) negative definite

Ex. 19.1
$$f(x) = 4x_1^2 - 4x_1 x_2 + 2x_2^2$$

 $x^{(i)} = \begin{bmatrix} 0 \\ 1 \end{bmatrix}$
 $\nabla f(x^{(i)}) = \begin{bmatrix} -4 \\ 4 \end{bmatrix}$
 $= f(\begin{bmatrix} 0 \\ 1 \end{bmatrix} - t \begin{bmatrix} -4 \\ 4 \end{bmatrix})$
 $= f(\begin{bmatrix} 4t \\ 1-4t \end{bmatrix})$
 $= 160t^2 - 32t + 2$

 $t_1 = \frac{1}{10}$ is a global minimizer of ψ , since $\psi''(t) = 320 > 0$

 $\chi^{(2)} = \begin{bmatrix} 0 \\ 1 \end{bmatrix} - \frac{1}{10} \begin{bmatrix} -4 \\ 4 \end{bmatrix} = \begin{bmatrix} 2/5 \\ 1/5 \end{bmatrix}$

4 (t) = 320t - 32

Ex. 18.5

(b) yes

(c) no

(d) yes

continuing like this
gives
$$X^{(3)} = \begin{bmatrix} 0 \\ 1/5 \end{bmatrix}$$

$$f(x) = 2X_1^4 + X_2^2 - 4X_1 X_2 + 4X_2^2 + 4X_1 X_2^2 +$$

Ex. 19.2
$$f(x) = 2X_1^4 + X_2^2 - 4X_1 X_2 + 5X_2$$

$$X^{(0)} = \begin{bmatrix} 0 \\ 0 \end{bmatrix}$$

$$\nabla f(x) = \begin{bmatrix} 8X_1^3 - 4X_2 \\ 2X_2 - 4X_1 + 5 \end{bmatrix}$$

$$\chi^{(0)} = \begin{bmatrix} 0 \\ 0 \end{bmatrix}$$

$$\nabla f(x) = \begin{bmatrix} 8x_1^3 - 4x_2 \\ 2x_2 - 4x_1 + 5 \end{bmatrix}$$

$$\varphi_o(t) = f\left(\begin{bmatrix} o \\ o \end{bmatrix} - t \begin{bmatrix} o \\ 5 \end{bmatrix}\right)$$

$$= 25t^2 - 25t$$

$$(0'(t) = 50t - 25$$

$$t_o = \frac{1}{2} i$$

$$\chi^{(i)} = 1$$

$$\varphi_o'(t) = 50t - 25$$

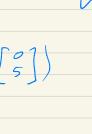

$$t_o = \frac{1}{2} \text{ is a global minimizer}$$

$$\text{Since } \varphi_o''(t) = 50 > 0$$

$$\chi^{(1)} = \begin{bmatrix} 0 \\ 0 \end{bmatrix} - \frac{1}{2} \begin{bmatrix} 0 \\ 5 \end{bmatrix} = \begin{bmatrix} 0 \\ -\frac{5}{2} \end{bmatrix}$$

Ex. 19.3 Yes, since f is strictly convex, coercive and has continuous

first partial derivatives (check all three conditions)

$$\nabla f(x^{(0)}) = \begin{bmatrix} 0 \\ 5 \end{bmatrix}$$

So
$$X^*$$
 with $Ax^*=-b$ is a critical point

$$Hf(x) = A \text{ is positive definite}$$

$$So x^* \text{ is a strict global minimizer}$$

$$X^{(1)} = X^{(0)} - A^{-1}(b + Ax^{(0)}) = -A^{-1}b = x^*$$

 $\nabla f(x) = b + Ax$

Ex. 19.4

$$x^{(1)} = x^{(0)} - A^{-1}(b + Ax^{(0)}) = -A^{-1}b = x^{*}$$

$$f(x) = \frac{2}{3} |x|^{3/2}$$

$$\nabla f(x) = \begin{cases} x^{\frac{1}{2}} & \text{if } x > 0 \\ -(-x)^{\frac{1}{2}} & \text{if } x > 0 \end{cases}$$

Ex. 19.5
$$f(x) = \frac{2}{3} |x|^2$$

$$\nabla f(x) = \begin{cases} x^{\frac{1}{2}} & \text{if } x > 0 \\ -(-x)^{\frac{1}{2}} & \text{if } x > 0 \end{cases}$$

$$Hf(x) = \begin{cases} \frac{1}{2} x^{-\frac{1}{2}} & \text{if } x > 0 \\ \frac{1}{2} (-x)^{\frac{1}{2}} & \text{if } x < 0 \end{cases}$$

$$(-(-x)) \quad \text{if } x \ge 0$$

$$Hf(x) = \begin{cases} \frac{1}{2}x^{-\frac{1}{2}} & \text{if } x \ge 0 \\ \frac{1}{2}(-x)^{-\frac{1}{2}} & \text{if } x \le 0 \end{cases}$$

$$x^{(6)} = 1 \qquad 7^{-1}$$

$$Hf(x) = \int_{-\frac{1}{2}}^{\frac{1}{2}} x^{-\frac{1}{2}} if x > 0$$

$$Hf(x) = \int_{-\frac{1}{2}}^{\frac{1}{2}} x^{-\frac{1}{2}} if x < 0$$

$$\chi^{(o)} = 1$$

$$\chi^{(o)} = \chi^{(o)} - \left[Hf(\chi^{(o)}) \right] \nabla f(\chi^{(o)}) = 1 - 2 \cdot 1 = -1$$

$$\begin{aligned}
& X^{(0)} = 1 \\
& X^{(0)} = X^{(0)} - \left[Hf(X^{(0)}) \right]^{-1} \nabla f(X^{(0)}) = 1 - 2 \cdot 1 = -1
\end{aligned}$$

$$x^{(0)} = 1 x^{(0)} = x^{(0)} - \left[Hf(x^{(0)}) \right] \nabla f(x^{(0)}) = 1 - 2 \cdot 1 = -1$$

$$x^{(i)} = x^{(i)} - \left[Hf(x^{(i)}) \right] \nabla f(x^{(i)}) = 1 - 2 \cdot 1 = -1$$

$$x^{(i)} = -1 - 2(-1) = 1$$

$$\chi^{(2)} = -1 - 2(-1) = 1$$

$$\chi^{(2)} = -1 - 2(-1) = 1$$

$$\chi^{(3)} = -1$$

$$\chi^{(3)} = -1 - 2(-1) = 1$$

$$\chi^{(3)} = -1$$

$$\chi^{(3)} = -1$$

$$\chi^{(3)} = -1$$

$$X^{(3)} = -1$$
